Table

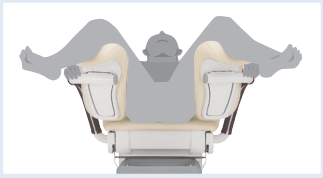

DG-770 SERIES Urological Examination Table

Reduces stress on both patients and doctors/nurses

Improved Electric Legrest Operation

Examination area

Widened leg opening secures a sufficient examination area.
Leg rests are designed to comfortably cushion and support the patient in the ideal lithotomy position, allowing for smooth procedure.

Leg-closed examination position

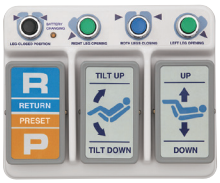

Leg-closed examination position switch allows for position change for examination with legs closed. Individualized leg opening can be operated according to the condition of patients including those after surgery or with disease.

Selective leg opening

Foot control allows you to easily open right and left legs individually. You can gradually open one after the other to respond to each patient.

Standard

Wireless foot control

Infrared-based wireless foot control is employed to require no cords, offering a neat examination room.

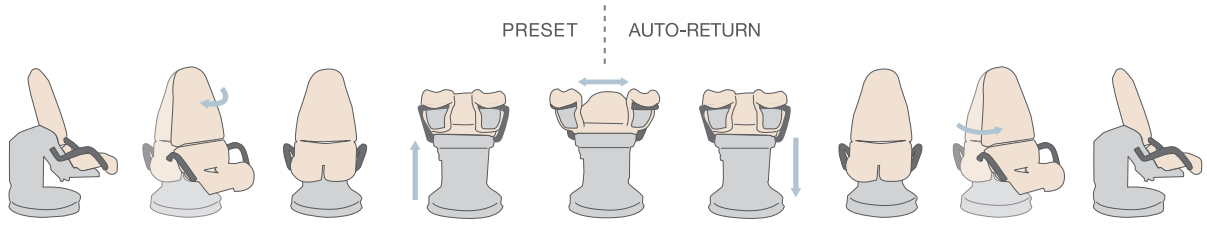

Main unit auxiliary switches

Main unit is equipped with PRESET and RETURN switches, allowing for auxiliary operation from the main unit.

Operation Process

Clinics can choose between fixing and rotating tables in accordance with their space demands and practices.

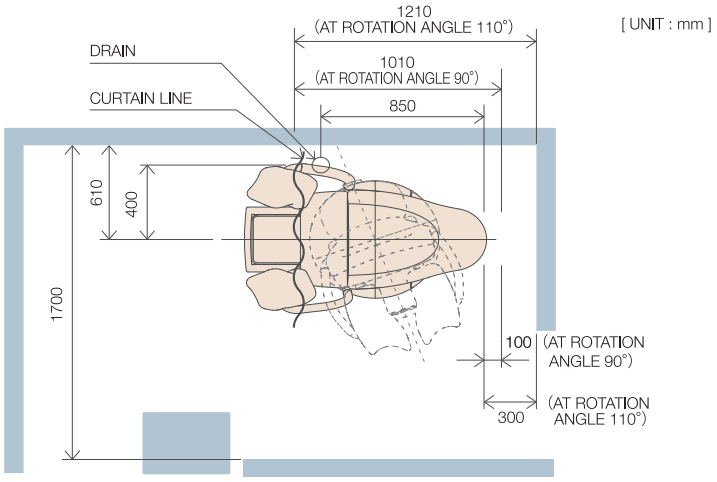

DG-770-UR Rotating type

DG-770-UF Fixing type

Space
